

An Introduction to WEKA

Content

- What is WEKA?
- The Explorer:
 - Preprocess data
 - Classification
 - Clustering
 - Association Rules
 - Attribute Selection
 - Data Visualization
- References and Resources

What is WEKA?

- Waikato Environment for Knowledge Analysis
 - It's a data mining/machine learning tool developed by Department of Computer Science, University of Waikato, New Zealand.
 - Weka is also a bird found only on the islands of New Zealand.

Download and Install WEKA

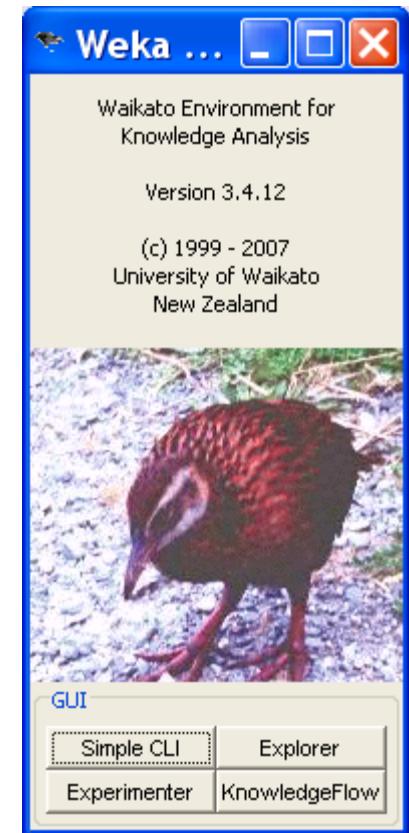

- Website:
<http://www.cs.waikato.ac.nz/~ml/weka/index.html>
- Support multiple platforms (written in java):
 - Windows, Mac OS X and Linux

Main Features

- 49 data preprocessing tools
- 76 classification/regression algorithms
- 8 clustering algorithms
- 3 algorithms for finding association rules
- 15 attribute/subset evaluators + 10 search algorithms for feature selection

Main GUI

- Three graphical user interfaces
 - “The Explorer” (exploratory data analysis)
 - “The Experimenter” (experimental environment)
 - “The KnowledgeFlow” (new process model inspired interface)

Content

- What is WEKA?
- The Explorer:
 - Preprocess data
 - Classification
 - Clustering
 - Association Rules
 - Attribute Selection
 - Data Visualization
- References and Resources

Explorer: pre-processing the data

- Data can be imported from a file in various formats: ARFF, CSV, C4.5, binary
- Data can also be read from a URL or from an SQL database (using JDBC)
- Pre-processing tools in WEKA are called “filters”
- WEKA contains filters for:
 - Discretization, normalization, resampling, attribute selection, transforming and combining attributes, ...

WEKA only deals with “flat” files

```
@relation heart-disease-simplified
```

```
@attribute age numeric  
@attribute sex { female, male }  
@attribute chest_pain_type { typ_angina, asympt, non_anginal, atyp_angina }  
@attribute cholesterol numeric  
@attribute exercise_induced_angina { no, yes }  
@attribute class { present, not_present }
```

```
@data  
63,male,typ_angina,233,no,not_present  
67,male,asympt,286,yes,present  
67,male,asympt,229,yes,present  
38,female,non_anginal,?,no,not_present  
...
```

Flat file in
ARFF format

WEKA only deals with “flat” files

```
@relation heart-disease-simplified
```

```
@attribute age numeric
```

```
@attribute sex { female, male}
```

```
@attribute chest_pain_type { typ_angina, asympt, non_anginal, atyp_angina}
```

```
@attribute cholesterol numeric
```

```
@attribute exercise_induced_angina { no, yes}
```

```
@attribute class { present, not_present}
```

```
@data
```

```
63,male,typ_angina,233,no,not_present
```

```
67,male,asympt,286,yes,present
```

```
67,male,asympt,229,yes,present
```

```
38,female,non_anginal,?,no,not_present
```

```
...
```

Log

Explorer: building “classifiers”

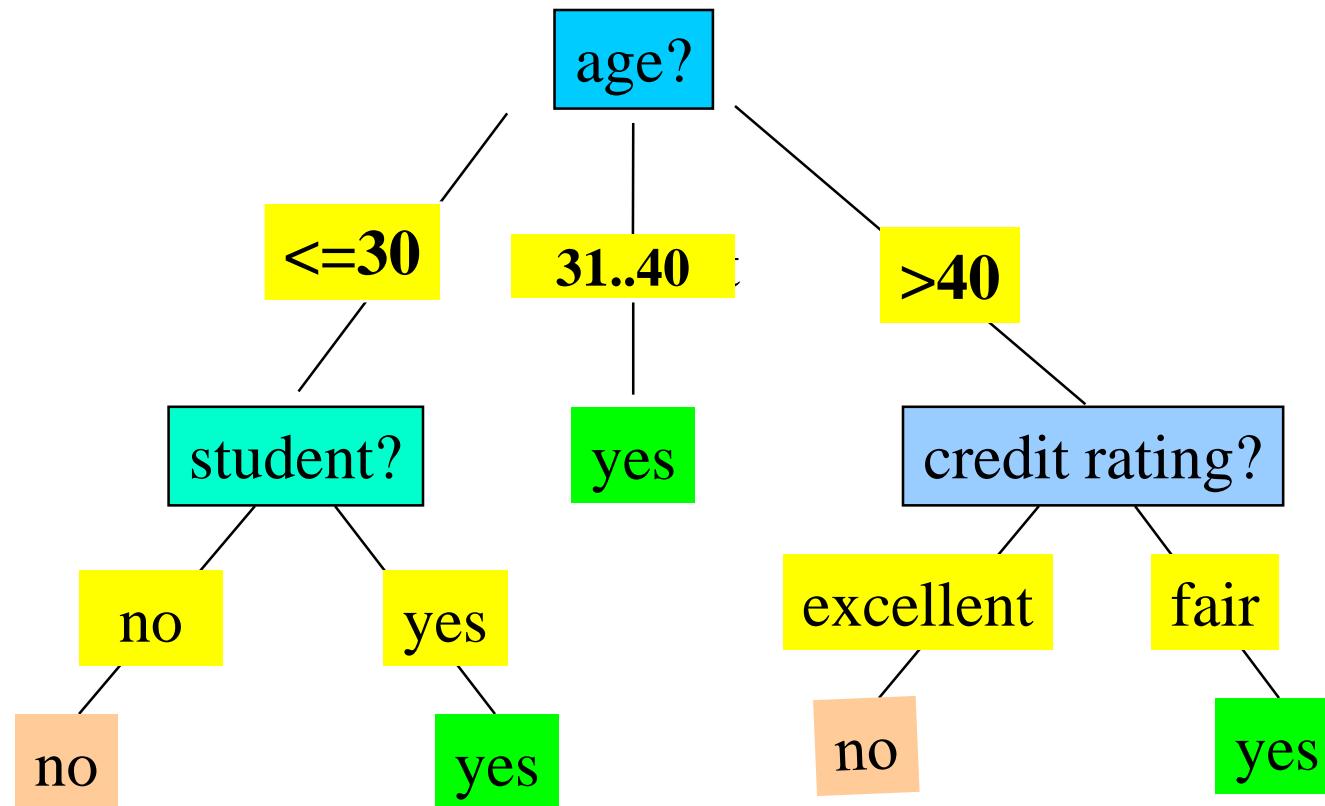

- Classifiers in WEKA are models for predicting nominal or numeric quantities
- Implemented learning schemes include:
 - **Decision trees** and lists, instance-based classifiers, support vector machines, multi-layer perceptrons, logistic regression, Bayes’ nets, ...

Decision Tree Induction: Training Dataset

age	income	student	credit_rating	buys_computer
<=30	high	no	fair	no
<=30	high	no	excellent	no
31...40	high	no	fair	yes
>40	medium	no	fair	yes
>40	low	yes	fair	yes
>40	low	yes	excellent	no
31...40	low	yes	excellent	yes
<=30	medium	no	fair	no
<=30	low	yes	fair	yes
>40	medium	yes	fair	yes
<=30	medium	yes	excellent	yes
31...40	medium	no	excellent	yes
31...40	high	yes	fair	yes
>40	medium	no	excellent	no

This follows
an example
of Quinlan's
ID3 (Playing
Tennis)

Output: A Decision Tree for “buys_computer”

Explorer: finding associations

- WEKA contains an implementation of the Apriori algorithm for learning association rules
 - Works only with discrete data
- Can identify statistical dependencies between groups of attributes:
 - milk, butter \Rightarrow bread, eggs (with confidence 0.9 and support 2000)
- Apriori can compute all rules that have a given minimum support and exceed a given confidence

Basic Concepts: Frequent Patterns

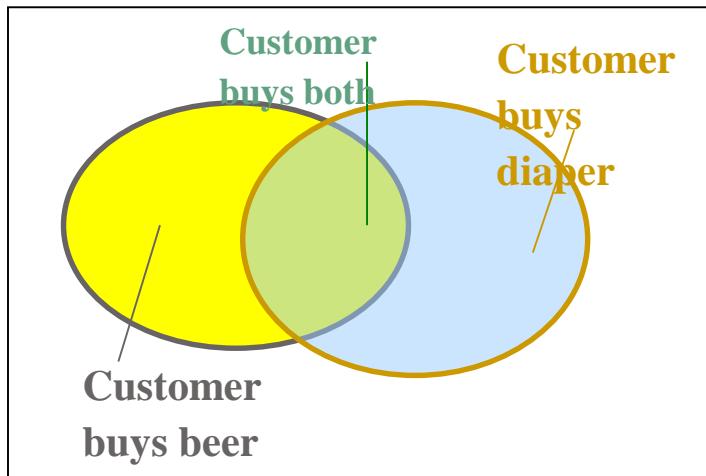

Tid	Items bought
10	Beer, Nuts, Diaper
20	Beer, Coffee, Diaper
30	Beer, Diaper, Eggs
40	Nuts, Eggs, Milk
50	Nuts, Coffee, Diaper, Eggs, Milk

- **itemset:** A set of one or more items
- **k-itemset** $X = \{x_1, \dots, x_k\}$
- **(absolute) support**, or, **support count** of X : Frequency or occurrence of an itemset X
- **(relative) support**, s , is the fraction of transactions that contains X (i.e., the probability that a transaction contains X)
- An itemset X is **frequent** if X 's support is no less than a *minsup* threshold

Basic Concepts: Association Rules

Tid	Items bought
10	Beer, Nuts, Diaper
20	Beer, Coffee, Diaper
30	Beer, Diaper, Eggs
40	Nuts, Eggs, Milk
50	Nuts, Coffee, Diaper, Eggs, Milk

- Find all the rules $X \rightarrow Y$ with minimum support and confidence
 - support**, s , probability that a transaction contains $X \cup Y$
 - confidence**, c , conditional probability that a transaction having X also contains Y

Let $\text{minsup} = 50\%$, $\text{minconf} = 50\%$

Freq. Pat.: Beer:3, Nuts:3, Diaper:4, Eggs:3, {Beer, Diaper}:3

- Association rules: (many more!)
 - $\text{Beer} \rightarrow \text{Diaper}$ (60%, 100%)
 - $\text{Diaper} \rightarrow \text{Beer}$ (60%, 75%)

Explorer: attribute selection

- Panel that can be used to investigate which (subsets of) attributes are the most predictive ones
- Attribute selection methods contain two parts:
 - A search method: best-first, forward selection, random, exhaustive, genetic algorithm, ranking
 - An evaluation method: correlation-based, wrapper, information gain, chi-squared, ...
- Very flexible: WEKA allows (almost) arbitrary combinations of these two

Explorer: data visualization

- Visualization very useful in practice: e.g. helps to determine difficulty of the learning problem
- WEKA can visualize single attributes (1-d) and pairs of attributes (2-d)
 - To do: rotating 3-d visualizations (Xgobi-style)
- Color-coded class values
- “Jitter” option to deal with nominal attributes (and to detect “hidden” data points)
- “Zoom-in” function
